

Andrei Lucero

The screenshot shows the JDoodle Online C# Compiler IDE interface. The browser's address bar displays the URL `jdoodle.com/compile-c-sharp-online/`. The page title is "Online C# Compiler IDE". The main code editor contains the following C# code:

```
using System;
class Program
{
    static void Main()
    {
        int numero = 50;
        while (numero > 0)
        {
            Console.WriteLine(numero);
            numero--;
        }
        Console.WriteLine("Fin del programa");
        Console.WriteLine("Hecho por Andrei Lucero");
    }
}
```

Below the code editor, there is a section for "Execute Mode, Version, Inputs & Arguments". The "Execute Mode" is set to "Interactive". The "Commandline Arguments" field is empty.

The screenshot shows the output window of the JDoodle Online C# Compiler IDE. The output is displayed in a black terminal window with white text. The output shows the execution of the program, printing the numbers 50 down to 1, followed by the messages "Fin del programa" and "Hecho por Andrei Lucero".
